

## Your Challenge

*Data connectivity between various machines, software, and manufacturing systems to achieve Industry 4.0 and Smart Factory initiatives.*

## The solution: Co-NECT Machine Interface

Co-NECT is a standalone, neutral connectivity machine interface that can run on any machine or computer. Co-NECT is the foundational tool to seamlessly share data across the entire manufacturing ecosystem.

- Provides machine-to-machine (M2M) communication.
- Enables closed loop solutions.
- Seamlessly exchanges data between both new and legacy equipment.
- Performs bi-directional communication.
- Takes any data format from any machine on the input side.
- Outputs standard protocol formats simultaneously including CAMX, SECS/GEM, ZVEI, JSON, and CFX.
- Offers the largest library of standard interfaces for both commercial and proprietary MES and ERP solutions.

As a mature system supported by secure and reliable architecture, Co-NECT is currently used in hundreds of factories across the globe – this proven technology is consistently chosen by leading machine and software vendors in the electronics manufacturing industry.

# Co-NECT

\*with Cogiscan

## Key Features

- **MODULAR**  
Adapts to every customer's manufacturing ecosystem
- **FLEXIBLE**  
Supports all present and future industry standards
- **MATURE**  
Supports all proprietary interfaces from leading equipment and software vendors
- **CONFIGURABLE**  
Compatible with Cogiscan's TTC Platform

## Benefits

- Easy to implement
- Cost effective
- Solid foundation to enable Industry 4.0

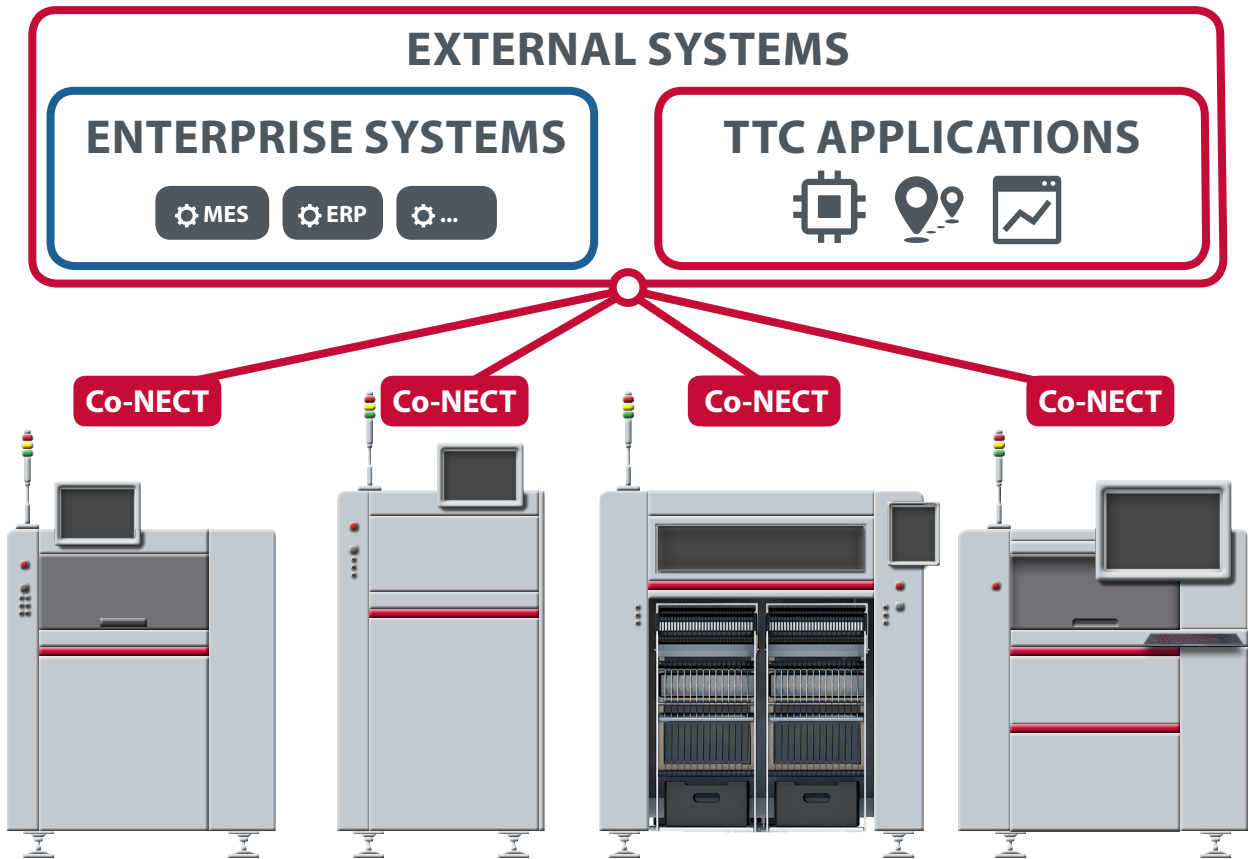

For more information on **Co-NECT** or any other Cogiscan product, please contact us!

## Co-NECT in action

The Co-NECT machine interface is configured on each machine to appropriately gather and transfer machine data events in the required protocols. Co-NECT communicates directly with enterprise systems. Co-NECT can also feed collected data into Cogiscan's TTC Platform to provide more meaningful and actionable intelligence to that data, which allows for deeper integration with enterprise systems or Cogiscan's TTC Applications.

*“ Our in-depth evaluation and real-life production testing demonstrated that Cogiscan's Co-NECT technology is by far the best solution on the market. It can get more data from any machine than any other alternative. ”*

- Michael Lo

Director of SMT Council, Haina
